

Centrifugal Screening Machine

JEL PS

► JEL PS

Due to its wide range of applications, the centrifugal sieve JEL PS can be used for pourable bulk solids both if product without oversize grain needs to be strained and as a straining sieve for agglomerated products.

► Operation

The screening, straining or crushing process is discontinuous. The product is fed from above, taken by the rotor and strained through the sieve mesh. The sieve basket can be pulled out on the front side for cleaning. The machine is driven by a shaft-mounted gear motor.

► Machine equipment

The JEL PS has a modular and compact structure.
