## Filling Big Bags under Containment Conditions? Easy.

Filling a big bag under containment conditions doesn't have to be complicated anymore: As our JEL SmartCon series, which until now could only be used for emptying, now also comes in a big bag filling version.

Thanks to the high degree of automation, the contamination-free filling of big bags up to OEB 4 can be done safely and in just a few simple steps.

Visit our new product page to find out what makes the handling of the **JEL SmartCon BS** system so special and why a leakproofness test is a good idea to prevent contamination before filling.

## Emptying up to OEB 4: a Step-by-Step Explanation

There's also something new to report when it comes to contamination-free big bag emptying:

We've put together a short product video that reveals the secret behind the simple handling of the **JEL SmartCon ES** containment attachment system and that takes you through the operating steps one by one.

You will also find out why the JEL SmartCon ES system is the only real solution that can protect your process from contamination as a result of liner damage - even before the emptying starts.

## JEL Konti II: an All-Rounder in Action

Whether your focus is on hygienic design, simple operability or particularly quick screen changes, the JEL Konti II vibration screening machine meets all requirements.

You wonder how that works in detail? In our new product video we'll show you just how easy it is to operate the JEL Konti II and what other advantages the versatile vibration screening machine has to offer.
