

Dear readers,

well rested and freshly motivated for the final spurt in the last quarter, we are back with the latest edition of our newsletter, packed with the most exciting Engelsmann topics at the moment:

- Learn how you can reliably **tackle agglomerates and lumps in your product** by screening or crushing technologies.
- Find out more about the advantages of **individually customized hygienic emptying of big bags** in a practical example from the pharmaceutical industry.
- And last but not least: In our new product video we present the **round vibration screen JEL VibRS** with all its functionalities and advantages - explained simply and clearly.

We hope you enjoy reading!
Your Engelsmann team

Easily solved: Problems with agglomerated bulk solids

If you work with various bulk solids you will know that agglomerates, lumps and other nuisances are not uncommon. We show you reliable technologies that help.

A bunch of functionality in a small space: Hygienic big bag emptying made by Engelsmann

Two different follow-up processes should be supported with one big bag emptying station without time-consuming conversion measures and under strict hygienic conditions: The connection to a pneumatic conveying system with subsequent silo loading. And, alternatively, the use as a dust-free solution for filling containers.
